r (bp)
forecast CDF F = N(0, 5^2)
outcome $\mathbb{1}\{y \le x\}$, y = 12 bp
CRPS $= \int (F(x) - \mathbb{1}\{y \le x\})^2 dx$ (squared gap)
weight $w(r) = \sigma(\frac{r-\delta}{h}) + \sigma(\frac{-r-\delta}{h})$, δ = 15, h = 2
